**Notes on table**

- 1) Nominal power P<sub>N</sub> Mechanical power output at motor shaft at running torque of part-turn actuator (corresponds to approx. 35 % of maximum torque).  
The consumed electrical power can be calculated using the following formula:  
$$P = U \times I \times \cos \varphi$$
- 2) Service/starting capacitor For VW/SW motors, operating capacitors are integrated within the motor.
- 3) Nominal current I<sub>N</sub> Current at running torque
- 4) Max. current I<sub>max</sub> Current at maximum torque

**Notes on installation and sizing**

Motor data	Motor data is approximate. Due to usual manufacturing tolerances, there may be deviations from the values given.																		
Motor protection	To protect against overheating, thermoswitches or PTC thermistors are embedded in the motor windings.																		
<b>Actuators without integral controls (AUMA NORM):</b> Thermoswitches or PTC thermistors have to be considered within the external controls (refer to terminal plan). <b>Note:</b> Failure to connect thermoswitches or PTC thermistors shall void the warranty for the motor. <b>Rating of the thermoswitches</b>

Switchgear sizing	For motor operation, reversing contactors (mechanically, electrically and electronically locked) or thyristors (electronically locked) can be used.																		
<b>Actuators without integral controls (AUMA NORM):</b> Switchgear are supplied by the customer. We recommend specification of switchgear suitable for their rated operating power/motor power in compliance with the assigned AUMA power class.
